# BALLISTICS REPORT

## 338 LAPUA – 236GR. PREDATOR

REPORT DATE	REPORT NAME	PREPARED BY
March 16, 2018	338 Lapua 236gr. Predator	ARM Technician

### Specifications:

Cartridge: Go West Trading Match Grade  
Projectile: 236 Grain, CNC Lathed All Brass (ARM)  
Primer: CCI 250 (Large Rifle Mag)  
Velocity: 3100  
Energy: 5037 ft.\lbs.  
BC: .750

Test Weapon: DRD Kavarri

### Load Data:

Powder: Retumbo  
Powder Load: 99gr.  
Projectile: Predator  
COL: 3.69

## COMMENTS

We are excited to introduce a new line of LONG-DISTANCE SHOOTING ammunition. This new ammunition has unparalleled technology with the projectile and case. The bullet features a monolithic lathe turned projectile that is produced from proprietary brass alloy and has a patented parasitic drag elimination design on the tail of bullet, which eliminates dynamic transition instability during transonic flight speeds. This allows the bullet to get through transonic speed and into subsonic speed without destabilization, allowing for 1 MILE plus shots.
